

## THE QUANTUM GRAVITY INITIATE CAUSE AND EFFECT

By Michael C Pavledis © Nov 2005

### How and why is Gravity a product of Matter?

We know that the nature of centripetal spherical collapse is the mechanism that creates a constant centripetal density differential within a body of high density mass.

When such a body is three dimensionally dissected into a series of conjunctional wedges from the surface to its centre point the density variation between them can be shown to be equally proportional from the surface to the centre. When in free space, each wedge can then be shown to have a sump with a heightened propensity for energy absorption and thus be seen as “a proponent of Gravity”.

*Consider: Condensed energy, mass, that is linked to a common centre to form a collapsing sphere creates its own gravity by the proportional density variance between the two curved ends of all the possible minimal three-dimensional wedges drawn conjunctively from the surface of the sphere to its centre point.*
